For isotropic media, one can process the elastic data either by separating wave-modes and migrating each mode using methods based on acoustic wave theory, or by migrating the whole elastic data set based on the elastic wave equation .

**Acoustic and Elastic Wave Fields in Geophysics, III**

Description The purpose of this dissertation is to model, simulate and design metamaterials for underwater sound and elastic wave control. Water-based acoustic metamaterials usually suffer from low transmission due to the impedance mismatch with water; elastic metamaterials also suffer from this issue not only because of the impedance mismatch to the host medium, but also due to the multiple ...
