Apache Ant is a software tool for automating software build processes, which originated from the Apache Tomcat project in early 2000. It was a replacement for the Make build tool of Unix, and was created due to a number of problems with Unix's make. It is similar to Make but is implemented using the Java language, requires the Java platform, and is best suited to building Java projects.

To publish HTML from your XML documents, you just need an XSLT processor.It will include the XPath language since that is used extensively in XSLT. To get to print, you need an XSLT processor to produce an intermediate formatting objects (FO) file, and then you need an XSL-FO processor to produce PostScript or PDF output from the FO file. A diagram of the DocBook Publishing Model is available ...
