

aspects of homogeneous catalysis pdf

Catalysis is the process of increasing the rate of a chemical reaction by adding a substance known as a catalyst (*katalyst*), which is not consumed in the catalyzed reaction and can continue to act repeatedly. Because of this, only very small amounts of catalyst are required to alter the reaction rate in principle. In general, chemical reactions occur faster in the presence of a ...

Enzyme catalysis is the increase in the rate of a chemical reaction by the active site of a protein. The protein catalyst may be part of a multi-subunit complex, and/or may transiently or permanently associate with a Cofactor (e.g. adenosine triphosphate). Catalysis of biochemical reactions in the cell is vital due to the very low reaction rates of the uncatalysed reactions at room temperature ...

Journal of the Taiwan Institute of Chemical Engineers (formerly known as Journal of the Chinese Institute of Chemical Engineers) publishes original works, from fundamental principles to practical applications, in the broad field of chemical engineering with special focus on three aspects: Chemical and Biomolecular Science and Technology, Energy and Environmental Science and Technology, and ...

Journal of the Taiwan Institute of Chemical Engineers

The development of robust and selective methods for the selective N-monomethylation of primary anilines would greatly simplify the synthesis of N-methylanilines and several approaches have been reported. On the industrial scale, N-monomethylation of primary anilines is accomplished via reaction with methanol in the vapor phase using heterogeneous transition metal catalysts at high temperatures ...

Selective N-monomethylation of primary anilines with

Metal-organic framework (MOF) structures are amenable to expansion and incorporation of multiple functional groups within their interiors. (A) The isorecticular expansion of MOFs maintains the network's topology by using an expanded version of the parent organic linker. Examples of catalysis in MOFs are shown in the large space created by IRMOF-74-XI; Me is a methyl group.
