

bone marrow transplantation and pdf

Bone marrow is a semi-solid tissue which may be found within the spongy or cancellous portions of bones. In birds and mammals, bone marrow is the primary site of new blood cell production or hematopoiesis. It is composed of hematopoietic cells, marrow adipose tissue, and supportive stromal cells. In adult humans, bone marrow is primarily located in the ribs, vertebrae, sternum, and bones of the ...

Bone marrow - Wikipedia

Hematopoietic stem cell transplantation (HSCT) is the transplantation of multipotent hematopoietic stem cells, usually derived from bone marrow, peripheral blood, or umbilical cord blood. It may be autologous (the patient's own stem cells are used), allogeneic (the stem cells come from a donor) or syngeneic (from an identical twin).. It is most often performed for patients with certain cancers ...

Comment www.thelancet.com Vol 374 September 12, 2009 857 have long-term effects on growth and fertility.² Therefore transplantation might not be done because of these risks. To enable this potentially curative treatment to be

Bone-marrow transplantation in non-malignant disease

A stem cell transplant* may sometimes be medically necessary for patients with lymphomas. With a stem cell transplant, the stem cells** obtained from bone marrow, peripheral blood, or umbilical cord blood are given back to the patient following high dose treatment, which can damage or ablate (kill off) these vital cells.

Autologous bone marrow transplant - Patients Against Lymphoma

Bone marrow is the soft and sponge-like tissue found inside the body's larger bones that produces blood cells. Bone marrow aspiration and biopsy are procedures used to collect and evaluate bone marrow cells and structure. Bone marrow has a honeycomb or sponge-like structure, consisting of a fibrous network that is filled with liquid.
