Electroculture - Wikipedia

Electroculture is a method of growing plants using electrical energy. It is based on the principle that electrical current can stimulate plant growth. The method involves passing a low-voltage electrical current through the soil or directly through the plant roots. This current is believed to mimic the natural electrical signals that plants use to communicate and grow. Electroculture has been used to grow a variety of plants, including vegetables, fruits, and ornamentals. It is a relatively new and experimental technique, and its effectiveness is still being studied.
