The speed of light in vacuum, commonly denoted  $c$ , is a universal physical constant important in many areas of physics. Its exact value is 299,792,458 metres per second (approximately 300,000 km/s (186,000 mi/s)). It is exact because by international agreement a metre is defined to be the length of the path travelled by light in vacuum during a time interval of  $1/299792458$  second.

### **Speed of light - Wikipedia**

Alta Velocidad Española (AVE) is a service of high-speed rail in Spain operated by Renfe, the Spanish national railway company, at speeds of up to 310 km/h (193 mph). Alta Velocidad Española translates to "Spanish High Speed", but the initials are also a play on the word ave, meaning "bird". As of August 2017, the Spanish AVE system is the longest HSR network in Europe with 3,240 km (2,010 mi ...

How to Calculate Velocity. In this Article: Article Summary Finding Average Velocity Finding Velocity from Acceleration Circular Velocity Community Q&A Velocity is an object's speed in a particular direction. Mathematically, velocity is often described as the change in position over the change in time.

### 4 Easy Ways to Find Velocity (with Pictures) - wikiHow

You cannot talk about the speed of light without defining your frame of reference. The measured speed of light in local inertial frames is 299792.458 km/sec. So if you want to make a comparison with "299792.458 km/sec" then you have to make it in a "local inertial frame". Special Relativity requires the frame of reference to be inertial (travel in a straight line).
