The Grace Instrument M5600 HPHT Rheometer is a true Couette, coaxial cylinder, rotational, high pressure and temperature rheometer. Elimination of bob shaft bearing allows the torque transducer to respond quickly and consistently to changing bob shaft torque, providing true rheology measurement under pressure.

Dynamic mechanical analysis (abbreviated DMA, also known as dynamic mechanical spectroscopy) is a technique used to study and characterize materials. It is most useful for studying the viscoelastic behavior of polymers. A sinusoidal stress is applied and the strain in the material is measured, allowing one to determine the complex modulus. The temperature of the sample or the frequency of the ...

THE VISCOSITY OF VISCOUS FLUIDS (PART A) 1 INTRODUCTION The aim of the experiment is to determine the viscosity of glycerine (a viscous fluid) by using guinea-and-feather apparatus and to determine the viscosity of the glycerine by using Hoesppler Method.

Rheology (/ ˈr iː• ɛː ˈ i ː ˈ i /; from Greek ῥῆμα, "flow" and -λογία, -logia, "study of") is the study of the flow of matter, primarily in a liquid state, but also as "soft solids" or solids under conditions in which they respond with plastic flow rather than deforming elastically in response to an applied force. It is a branch of physics which deals with the deformation and ...

1. Introduction. Materials whose properties vary considerably in the presence of an external stimulus are known as smart materials. Various smart materials have been identified so far, the most important of which are magnetic suspensions (magnetorheological fluids and ferrofluids), electrorheological fluids, piezoelectric materials and shape-memory alloys .
