Counting is the process of determining the number of elements of a finite set of objects. The traditional way of counting consists of continually increasing a (mental or spoken) counter by a unit for every element of the set, in some order, while marking (or displacing) those elements to avoid visiting the same element more than once, until no unmarked elements are left; if the counter was set ...

Count 5 of the 0.2mm squares, evenly distributed throughout the central square (commonly, the four corners and the central one). The rules are the same as for the other uses of the hemocytometer: establish beforehand two sides (lines) that you are not going to count (bottom and right for example) and keep those consistently for all the 0.2mm squares.
